1

PRODUCT DESCRIPTION

- The e-HLV Student Assessment System is designed to improve the assessment process at UiTM.
- It replaces the current manual method, which is time-consuming and prone to errors.
- The system offers secure login, automated grading, real-time feedback, and report generation.
- It helps students, educators, and coordinators manage assessments more efficiently.
- The Prototyping methodology is used to refine the system through user feedback.
- Development is done using Visual Studio Code on a web-based platform.

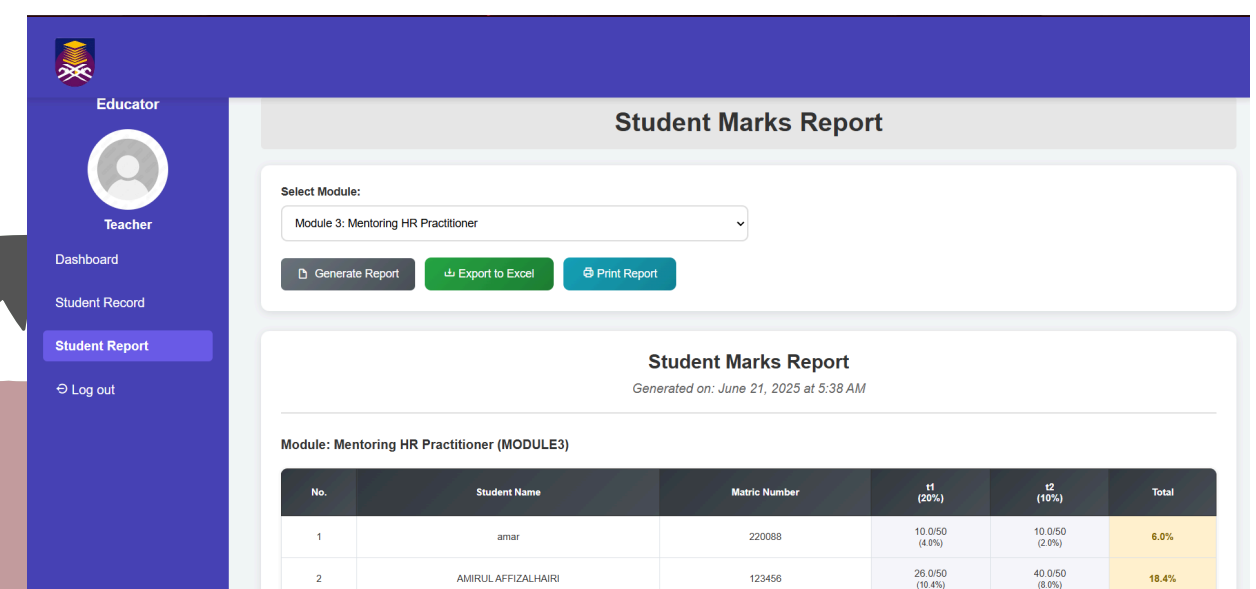

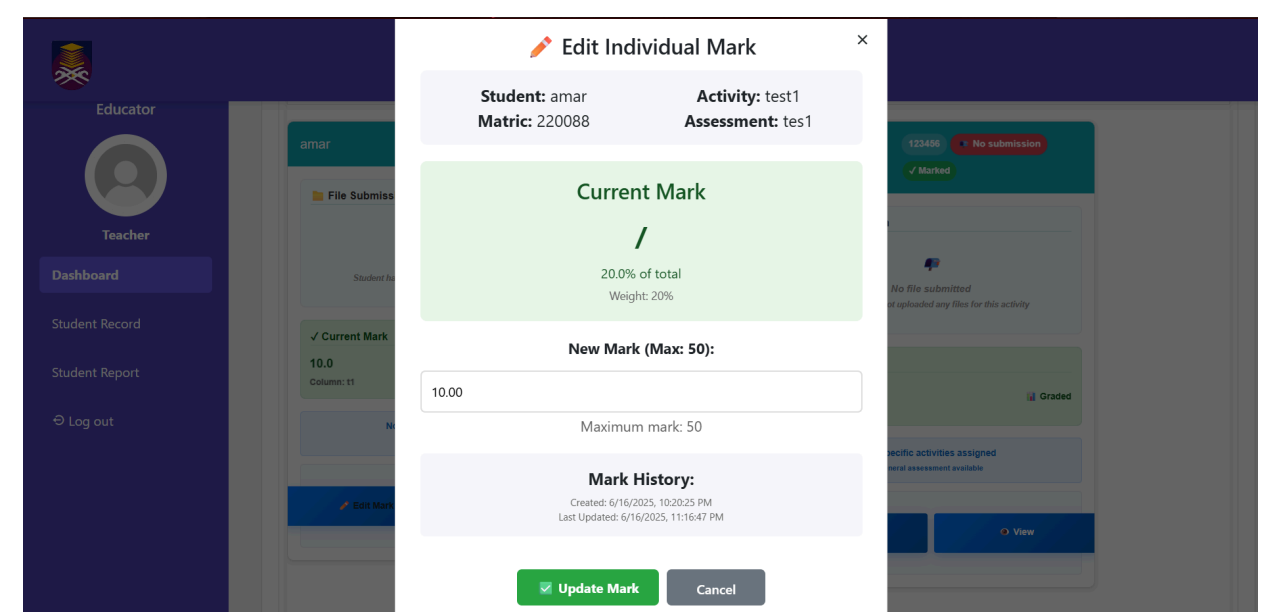

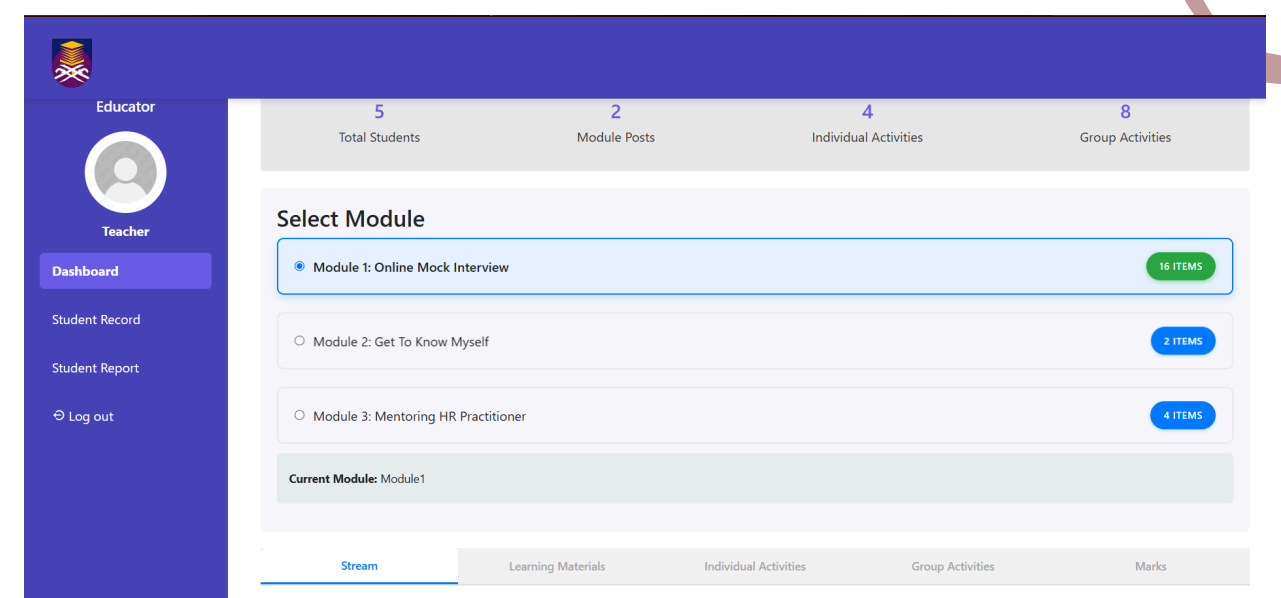

2

NOVELTY & INVENTIVENESS

- Introduces automation into a traditionally manual assessment process.
- Provides real-time mark validation and instant feedback for students.
- Features secure, role-based access for students, educators, and coordinators.
- Automatically generates assessment reports, saving time and reducing workload.

3

USEFULNESS

- The system saves time by automating the mark entry and grading process.
- It reduces human errors in assessment data and calculations.
- Students receive faster and more accurate feedback on their performance.
- Educators can easily generate and access performance reports.
